

Rane Group

Clean & Green Initiatives

Introduction

As a responsible corporate citizen, Rane believes that long term growth of the Indian economy and industry can be sustained only through environment friendly initiatives. It is also our experience that the initiatives taken to improve the environmental impact of a given process inevitably have a positive effect on the cost economies of the process. Therefore, we continuously review our business processes to make them cost effective and at the same time environmentally sustainable. Some of the specific initiatives taken by the Group in this direction are:

- ◆ **Wind Power**
- ◆ **Reduction of Carbon Footprint**
- ◆ **Green Building Certification**

Wind Power

Rane Group avails wind power from 13 Nos. Wind Energy Generators having a total installed capacity of 7.660 MW for its various manufacturing Units within Tamilnadu. The wind power constitutes approximately 25% of the total electricity requirements of these units.

Reduction of Carbon Footprint

A Pilot study was undertaken through an external Consultant to estimate the carbon footprint generated by one of the Group's manufacturing facilities in Chennai. The study threw up some interesting data on how carbon footprint is generated at all levels and how even small measures could lead up to reduction in carbon footprint. The results of the pilot study are being used to create awareness among the employees across the group on the subject and encourage them to adopt measures that would help reduce carbon footprint.

Green Building Certification

***Rane Institute for Employee Development (RIED)** located at Perungudi on the Old Mahabalipuram Road, Chennai is a LEED silver certified Green Building.*

***Rane Polytechnic Technical Campus (RPTC)** under construction in Tiruchirapalli is also likely to get green certification.*
